

The *Transroll*

Gravitational ware wash environment

The carpet free roller is essential in small laundries, as well as for drying racks and baskets at the machine's output.

Characterized with ingenious and robust design, it is used as a linear angle either powered by gravity or motorized. It can also be integrated with our other installations such as sorting station. The roller conveyor's main advantage remains the easiness of maintenance.

In most of our installations we find a module roller table, which is why we designed such a wide range; in order to suit all needs.

Our realization speak for us.
